Cena	**0,00 zł**

OPIS PRODUKTU

In mission-critical applications, clearly arranged and concise display of all relevant data is key for safe air traffic management (ATM). For minimizing the controllers' workload, data have to be presented very efficiently.
OPScenterTM Display offers integrated and ready-to-use visualization components that comprise
Multi layered display of information
Raw video support (radar scan conversion)
Multi-format map presentation
3D Open GL extensibility
Electronic Flight Strips
OPScenterTM Display allows to seamlessly integrate additional information like NOTAM, METAR and TAF. It provides toolbars, context sensitive menu bars and all the features that can be expected from a modern graphical user interface system.
Display developers will benefit from the ready-to-use basic display system and the wide range of standardized tools for further customisation.
