### OPIS PRODUKTU

The black F-22 WUXGA Multimedia Projector with Long Throw Zoom Lens and High Brightness (MKIII) Color Wheel from Barco is a professional installation projector adaptable to a range of use cases, such as flight simulators and theme park rides, museums, visitor attractions, and more. The projector features a brightness of up to 3000 lumens (depending on settings), has a native WUXGA (1920 x 1200) resolution and native 16:10 aspect ratio format. In addition to its native aspect ratio and resolution, through internal scaling, the F22 can accommodate a wide range of formats, from 480p SD all the way up to WUXGA (1920 x 1200).

The F22 features connectivity to accommodate a variety of sources. There are HDMI and DVI inputs for HDTV and digital computer sources. There is a VGA port for analog computer sources or for integration with existing A/V installations. Plus, there are composite, component, and S-video inputs to cover most analog video sources, whether SD or HD.

For remote operation, there is an Ethernet port that enables control across a local network, as well as an RS-232 port with loop-through for integration with automation systems such as Crestron. Finally, there is a USB port for direct operation from a computer.

#### EN32 Short Tele Zoom Lens

The Short Tele Zoom Lens features a throw ratio of 2.96 to 4.62:1 with 720, 2.71 to 4.22:1 with SXGA+, 1.6 to 2.21:1 with 1080p, and 1.6 to 2.21:1 with WUXGA. It can be considered a moderately long throw lens, best suited where the projector will be placed relatively far from the screen. Throw ratio is one of the most important specifications a projector lens has as it tells you the image size (width) you will get

at a given distance from the screen

#### The Right Color Wheel for Your Configuration

The F22 is available with a range of color wheel options, including High Brightness, Graphics, or VizSim, each with specific characteristics. As the VizSim color wheel focuses on color quality, it lowers color cross-talk and contamination, and reduces artifacting. The Graphics version offers a lower saturation but higher brightness for general AV use, and the High Brightness option provides high-brightness while retaining accurate color reproduction. This particular projector features the High Brightness (MKIII) color wheel.

#### Simplified Installation and Maintenance

The F22 can be installed in motion simulators without extra mounting hardware. And, as there's no need to dismount the projector when replacing the lamp, you can simply take off the front panel so that mechanical and optical settings are left untouched.

#### Integrated Automation Software

Thanks to the built-in real time clock and timer, the F22 can be set to perform a specific task - such as automatically starting and switching off, switching between various sources at set intervals. Up to 10 different programs can be stored individually.

#### Stereo 3D Support

The F22 features INFITEC EX 3D support, a stereoscopic 3D technology based on interference filters that sees use in cinema projection and other professional visualization applications.

#### Fully Networkable

Most projector settings and features can be set via the built-in web page, thus allowing for remote asset management.
