### OPIS PRODUKTU

#### Brilliant image quality for Large-Sized Space

BenQ SH963 Full HD high brightness projector offers high brightness projection with Full HD image quality. The higher the resolution, the better the image quality. Full HD resolution will give you 100% dot-to-dot viewing quality-distortion-free.

#### Enjoy Readability and Breathtaking Colors with BenQ

#### Premium Full HD 1080p Resolution

With the BenQ SH963, business presentations will never look the same - even in large venues like conference halls or auditoriums! The SH963 supports multiple video formats including 480p, 576p, 720p, 1080i and 1080p - giving you the flexibility to present in the latest video formats with Full HD quality. The BenQ SH963 sets a new standard of video presentation that delivers 5X more detail than traditional 480p projectors.

HD 480p (800x480 pixel)

Full HD (1920x1080 pixel)

#### Hollywood Quality Video (HQV™) Image Quality

Sophisticated HQV processing not only renders HD video sources in true 1080p high definition, but enhances standard definition content to new levels of clarity and vibrancy. Lower-resolution video sources such as 480i, whether analog or digital, are automatically converted to produce full HD-like

image quality.  
Without HQV

With HQV- Chroma Transition Enhancement

LAN Control with Crestron , PJ-Link and AMX

LAN Control is designed to help IT managers perform day-to-day projector maintenance and repair tasks efficiently and effectively – offering them full access and control over every projector directly from their workstations. The SH963 offers seamless support for the Crestron , PJ-Link and AMX LAN Control system.

Big Zoom for Extra Projector Installation Flexibility

SH963 1.5x big Zoom feature opens up space with an impressively wide range of throw distances. All you have to do is simply place the new projector right where your original ceiling mount is. Without adding projector setting re-construction costs to your budget list, you'll get to save the money for better use.

Lens Shift for Extra Room for Minor Miscalculations

Lens shift offers the extra flexibility to overcome any minor miscalculations during projector installation. All you have to do is adjust the switch next to the lens to shift the projected image left or right by 40% or up or down by 120% within the projector housing. With this helpful feature, you'll never have to worry about positioning the projector slightly out of place again!
