Nazwa **Wyświetlacz LED (wewnętrzny) Mitsubishi
LED Display (indoor) AVL-IDT4**

Cena **999 999,00 zł**

Producent **Mitsubishi**

OPIS PRODUKTU

Mitsubishi's Diamond Vision IDT4 sets a new benchmark for ultra-high resolution LED screen quality. The Diamond Vision IDT4 represents a dramatic step forward in indoor LED screen performance, as Mitsubishi's unique technologies deliver ultra-high resolution with perfect images, incredible contrast levels and pure, natural colours.

IDT4 features 3-in-1 LEDs at a true 4.00 mm pitch, delivering a physical resolution of 62,487 pixels per square metre with minimum viewing distance reduced to just 1 meter. IDT4 also offers extremely wide viewing angles with no colour shift at wider viewing angles.

Mitsubishi's mechanical design offers you the flexibility to create a screen to suit your size requirements, and deliver seamless images without alignment problems or distracting mullions as inherent in other technologies. The module construction makes installation easy with pre-assembled and framed panels to fit within your chosen location.

Mitsubishi's unique Colour Space Conversion - which allows chromaticity and luminance to be adjusted independently - provides excellent, natural colour rendition and combines with the true black of our ultra high-contrast screen face to stunning effect.

For any indoor application where image quality cannot be compromised, Mitsubishi's IDT4 is the ideal choice.

AVL-IDT4

Indoor use

Pixel pitch 4 mm

1,500 cd/m²

Viewing distance > 1m

Extreme viewing angle with no colour shift
High reliability
